

# PREPARING FOR YOUR INSTALLATION

---

Welcome! We are looking forward to a successful flooring installation with us. The ACS team will coordinate the installation around the time that works best for you. Preparing for your installation is a great way to ensure everything goes smoothly when our professionals arrive.

## HERE ARE SOME TIPS FOR PREPARING FOR THAT INSTALLATION DAY:

- The temperature should be between 65 and 85 degrees Fahrenheit for three days prior to installation. These temperatures are important to ensure adhesives we use during your installation cure properly.
- For tile and stone installations our team will need access to running water.
- Electricity must be available.
- Please disconnect and move electronics.
- Please remove items from under beds.
- Please remove items from closet floors.
- Please remove fragile and/or breakable items.

Unfortunately, heavy items such as pianos, gas stoves, exercise equipment, pool tables, waterbeds and aquariums cannot be moved by our teams. This is for their safety and the safety of your expensive items. Please contact our team prior to installation for a complete list of items we are not able to move.
